Age-Adjusted average rate	8.5 ¦	8.7	8.6	8.3	ł 7.5	ł 7.9	8.3	ł 7.5	ł 7.9	1 0.92 L
of hospitalizations per 1,000 †			1		¦	1	(8.1-8.4)	(7.3-7.6)	(7.8-8.0)	!

- CI Confidence Interval; LL = Lower Limit; UL = Upper Limit
- H/L/NS Chances are at least 19 in 20 that the rate is higher (H) or lower (L) than the Ontario rate (p < 0.05). Rates marked not significantly (NS) different do not reach this level of significance.
 - a Denominator: Total Population Based on 2011 Census population estimates, Statistics Canada.
 - ± Numerator: All unscheduled Hospital admissions for Surgical conditions for 2 year (2011-2012) observation period.

 Data source: Canadian Institute for Health Information (CIHI)
 - Rate Represents the average annual rate of hospitalizations for 2 year (2011-2012) observation period
 - * Rates based on fewer than 20 events are likely to be unstable and imprecise.
- Dash () Number and rate are suppressed since numerator is less or equal to 5 or due to missing/incomplete data.
 For any cell (numerator OR denominator) less than 6, additional cells will be suppressed to disallow the calculation of the missing (suppressed) cell. Reported totals include suppressed cells.
 - ** Rate ratios for both sexes were created by dividing the local area rate by the Ontario aggregate rate.
 - † Rates are age-adjusted using the direct method and the 1991 Canada population as the standard population.
