Age-Adjusted average rate	60.0	79.6	ł 69.9	63.6	l 80.4	ł 72.1	58.5	ł 84.1	† 71.4	1.02 NS
of hospitalizations per 1,000 †			!		<u> </u>	1	(55.2-61.7)	(80.4-87.8)	(68.9-73.9)	1

- CI Confidence Interval; LL = Lower Limit; UL = Upper Limit
- H/L/NS Chances are at least 19 in 20 that the rate is higher (H) or lower (L) than the City of Toronto rate (p < 0.05). Rates marked not significantly (NS) different do not reach this level of significance.
 - **a** Denominator: Total Population Based on 2011 Census population estimates, Statistics Canada.
 - Numerator: All unscheduled Hospital admissions for 2 year (2011-2012) observation period.
 Data source: Canadian Institute for Health Information (CIHI)
 - Rate Represents the average annual rate of hospitalizations for 2 year (2011-2012) observation period
 - * Rates based on fewer than 20 events are likely to be unstable and imprecise.
- Dash () Number and rate are suppressed since numerator is less or equal to 5 or due to missing/incomplete data.
 For any cell (numerator OR denominator) less than 6, additional cells will be suppressed to disallow the calculation of the missing (suppressed) cell. Reported totals include suppressed cells.
 - ** Rate ratios for both sexes were created by dividing the local area rate by the City of Toronto aggregate rate.
 - † Rates are age-adjusted using the direct method and the 1991 Canada population as the standard population.
