Age-Adjusted rate of hospital	12.0	12.0	l 12.0	12.8	12.7	l 12.7	18.6	12.8	15.6	¦ 1.30 H
days that are ALC †	1	1	1		ł	ł	(17.6-19.6)	(12.1-13.6)	(15.0-16.2)	1

CI Confidence Interval; LL = Lower Limit; UL = Upper Limit

H/L/NS Chances are at least 19 in 20 that the rate is higher (H) or lower (L) than the City of Toronto rate (p < 0.05). Rates marked not significantly (NS) different do not reach this level of significance.

Population Population - Based on 2011 Census population estimates, Statistics Canada.

- Denominator: Total number of inpatient days for 2 year (2011-2012) observation period. Data source: Canadian Institute for Health Information (CIHI)
 Numerator: Total number of Alternate Level of Care (ALC) Days for 2 year (2011-2012) of Care (ALC) Days for 2 year (2011-2012).
 - Numerator: Total number of Alternate Level of Care (ALC) Days for 2 year (2011-2012) observation period.
 Data source: Canadian Institute for Health Information (CIHI)

Rate Represents the percent of hospital days that are Alternate Level of Care (ALC) for 2 year (2011-2012) observation period

* Rates based on fewer than 20 events are likely to be unstable and imprecise.

Dash (-) Number and rate are suppressed since numerator is less or equal to 5 or due to missing/incomplete data.
 For any cell (numerator OR denominator) less than 6, additional cells will be suppressed to disallow the calculation of the missing (suppressed) cell. Reported totals include suppressed cells.

** Rate ratios for both sexes were created by dividing the local area rate by the City of Toronto aggregate rate.

† Rates are age-adjusted using the direct method and the 1991 Canada population as the standard population.
