days that are ALC †]	1	!		1	1	(14.0-16.0)	¦ (11.4-13.1)	(12.7-14.0)	1

- CI Confidence Interval; LL = Lower Limit; UL = Upper Limit
- H/L/NS Chances are at least 19 in 20 that the rate is higher (H) or lower (L) than the City of Toronto rate (p < 0.05). Rates marked not significantly (NS) different do not reach this level of significance.
- Population Population Based on 2011 Census population estimates, Statistics Canada.
 - a Denominator: Total number of inpatient days for 2 year (2011-2012) observation period.
 - Data source: Canadian Institute for Health Information (CIHI)
 - ± Numerator: Total number of Alternate Level of Care (ALC) Days for 2 year (2011-2012) observation period.

 Data source: Canadian Institute for Health Information (CIHI)
 - Rate Represents the percent of hospital days that are Alternate Level of Care (ALC) for 2 year (2011-2012) observation period
 - * Rates based on fewer than 20 events are likely to be unstable and imprecise.
 - Dash () Number and rate are suppressed since numerator is less or equal to 5 or due to missing/incomplete data.
 For any cell (numerator OR denominator) less than 6, additional cells will be suppressed to disallow the calculation of the missing (suppressed) cell. Reported totals include suppressed cells.
 - ** Rate ratios for both sexes were created by dividing the local area rate by the City of Toronto aggregate rate.
 - † Rates are age-adjusted using the direct method and the 1991 Canada population as the standard population.
