# N21 – Humber Summit Profile: Hospital Admissions

| Indicators | City of Toronto | Toronto Central LHIN | Humber Summit | |
|---|---|---|---|---|
| | Females | Females | Females (95% CI) | Rate Ratio** |
| **Prenatal Hospital Admissions (2011-2012) ±** | | | | |
| Total Population Ages 15-49 [a] | 687,795 | 315,930 | 2,935 | |
| # of Hospitalizations (2 yrs) ± | 33,330 | 12,241 | 176 | |
| Age-Adjusted average rate of hospitalizations per 1,000 † | 18.7 | 17.1 | 29.4 (25.1-33.7) | 1.57 H |

**CI** Confidence Interval; LL = Lower Limit; UL = Upper Limit

**H / L / NS** Chances are at least 19 in 20 that the rate is higher (H) or lower (L) than the City of Toronto rate ($p < 0.05$). Rates marked not significantly (NS) different do not reach this level of significance.

**[a]** Denominator: Total Population - Based on 2011 Census population estimates, Statistics Canada.

**±** Numerator: All unscheduled Hospital admissions for Prenatal conditions for 2 year (2011-2012) observation period. Data source: Canadian Institute for Health Information (CIHI)

**Rate** Represents the average annual rate of hospitalizations for 2 year (2011-2012) observation period

***** Rates based on fewer than 20 events are likely to be unstable and imprecise.

**Dash ( – )** Number and rate are suppressed since numerator is less or equal to 5 or due to missing/incomplete data. For any cell (numerator OR denominator) less than 6, additional cells will be suppressed to disallow the calculation of the missing (suppressed) cell. Reported totals include suppressed cells.

****** Rate ratios were created by dividing the local area rate by the City of Toronto aggregate rate.

**†** Rates are age-adjusted using the direct method and the 1991 Canada population as the standard population.
