

## N63 – The Beaches Profile: Hospital Admissions

| Indicators                                                | City of Toronto | Toronto Central LHIN | The Beaches         |  |  |                 |
|-----------------------------------------------------------|-----------------|----------------------|---------------------|--|--|-----------------|
|                                                           | Females         | Females              | Females<br>(95% CI) |  |  | Rate<br>Ratio** |
| <b>Prenatal Hospital Admissions (2011-2012) ±</b>         |                 |                      |                     |  |  |                 |
| Total Population Ages 15-49 <sup>a</sup>                  | 687,795         | 315,930              | 5,500               |  |  |                 |
| # of Hospitalizations (2 yrs) ±                           | 33,330          | 12,241               | 245                 |  |  |                 |
| Age-Adjusted average rate of hospitalizations per 1,000 † | 18.7            | 17.1                 | 21.1<br>(18.4-23.9) |  |  | 1.13 NS         |

**CI** Confidence Interval; LL = Lower Limit; UL = Upper Limit

**H / L / NS** Chances are at least 19 in 20 that the rate is higher (H) or lower (L) than the City of Toronto rate ( $p < 0.05$ ). Rates marked not significantly (NS) different do not reach this level of significance.

<sup>a</sup> Denominator: Total Population - Based on 2011 Census population estimates, Statistics Canada.

± Numerator: All unscheduled Hospital admissions for Prenatal conditions for 2 year (2011-2012) observation period.  
Data source: Canadian Institute for Health Information (CIHI)

**Rate** Represents the average annual rate of hospitalizations for 2 year (2011-2012) observation period

\* Rates based on fewer than 20 events are likely to be unstable and imprecise.

**Dash ( – )** Number and rate are suppressed since numerator is less or equal to 5 or due to missing/incomplete data.

For any cell (numerator OR denominator) less than 6, additional cells will be suppressed to disallow the calculation of the missing (suppressed) cell. Reported totals include suppressed cells.

\*\* Rate ratios were created by dividing the local area rate by the City of Toronto aggregate rate.

† Rates are age-adjusted using the direct method and the 1991 Canada population as the standard population.
