Dash ( – ) Number and rate are suppressed since numerator is less than 5.

\* Rates based on fewer than 20 events are likely to be unstable and imprecise.

\*\* Toronto numbers are the total of all geocoded data and table excludes records with missing/incomplete/invalid postal codes.

\*\*\* Leading cause of death is based on World Health Organization (WHO) ICD 10 code groupings and modifications by Association of Public Health Epidemiologists in Ontario (APHEO).

\*\*\*\* Premature Mortality - deaths at age less than 75 years. It is a measure that gives more weight to the death of younger people than to older people as deaths of younger people are often preventable.  
Data Source: Ontario Mortality Data 2003-2007, Ontario Ministry of Health and Long-Term Care, IntelliHEALTH ONTARIO. The data were extracted in March, 2011.
