

N24 – Black Creek Profile: Premature Mortality

Indicators	City of Toronto	Toronto Central LHIN	Black Creek		
	Count, %	Count, %	Count, %	(95% CI)	Rate Ratio**
Premature Mortality (2006 – 2008) ****					
Males					
Total Population Age <75, 2006 ^a	1,135,615	501,180	9,985		
Number of Premature Deaths Age <75, 2006-2008 ±	10,384	5,017	87		
Age Standardized Mortality Rate †	268.6	304.8	297.4	(234.2-360.5)	1.14 NS
Females					
Total Population Age <75, 2006 ^a	1,191,425	517,190	10,860		
Number of Premature Deaths Age <75, 2006-2008 ±	6,862	3,011	49		
Age Standardized Mortality Rate †	156.3	164.3	144.1	(103.6-184.6)	0.96 NS
Both sexes					
Total Population Age <75, 2006 ^a	2,327,040	1,018,370	20,845		
Number of Premature Deaths Age <75, 2006-2008 ±	17,246	8,028	136		
Age Standardized Mortality Rate †	208.7	230.5	214.8	(178.5-251.1)	1.06 NS

CI Confidence Interval.

H / L / NS Chances are at least 19 in 20 that the rate is higher (H) or lower (L) than the City of Toronto rate ($p < 0.05$). Rates marked not significantly (NS) different do not reach this level of significance.

***** Rates based on fewer than 20 events are likely to be unstable and imprecise.

****** Rate ratios were created by dividing the local area rate by the City of Toronto aggregate rate.

******* Toronto numbers are the total of all geocoded data and table excludes records with missing/incomplete/invalid Toronto postal codes.

******** Premature Mortality - deaths at age less than 75 years. It is a measure that gives more weight to the death of younger people than to older people as deaths of younger people are often preventable.

^a Denominator: Total Population - Statistics Canada, 2006 Census of Canada.

± Numerator: Number of Deaths, Ontario Mortality Data 2006-2008, Ontario Ministry of Health and Long-Term Care, IntelliHEALTH ONTARIO.

† Age Standardized Mortality Rate (ASMR) - the number of deaths that would occur for a given population if that population had the same age distribution as the 1991 Canadian population. The rate is calculated as number of deaths per 100,000 population.
